

CRYOLIPOLYSIS FOR FAT REDUCTION

WHAT IS CRYOLIPOLYSIS?

- A non-invasive technique to reduce fat.
- Targets and freezes fat cells beneath the skin.
- Ideal for localized fat like abdomen and thighs.

PROCESS:

- **Assessment:** Identify areas for fat reduction.
- **Application:** Gel pad and applicator placed on targeted area.
- **Cooling:** Fat cells are cooled and frozen.
- **Results:** Gradual reduction of fat layers.

BENEFITS:

- No surgery, no downtime.
- Noticeable fat reduction.
- Safe with minimal side effects.

IDEAL CANDIDATES:

- Those with persistent fat despite diet and exercise.
- Not suitable for individuals with obesity or certain cold-related conditions.

EXPECTED RESULTS:

- Changes may begin 3 weeks post-treatment.
- Average fat reduction of 15-28% in 4 months.

SAFETY:

- Low complication rate.
- No anesthesia required.
